

ym5-SubBook

Tested on Nexus 5x, Api27

Note:
The App should run on Nexus 5X, API27.

UserCustomAdapter: generate customized list of subscriptions and handle the edit/delete button click. It can communicate with MainActivity and EditViewActivity.

MainActivity: default activity to initialize the App. It controls the App's life cycle and handle add and delete buttons click.

EditViewActivity: it can be called by the UserCustomAdapter. User can edit and view each subscription's details through the page controlled by this activity.

Subscription: a class containing the information about a single subscription, including name, started date, monthly charge and comments. It has the methods to set and get values of different attributes.
